Find n^{th} Number in the Series

You are given an integer n which represents the position of a term in a special series. The first four numbers of the series are fixed as 1, 2, 3, 4. From the fifth term onward, each number is obtained by adding the four preceding numbers.

Your task is to determine the n^{th} number in this series.

Input Format:

- The input contains an integer n , denoting the position in the series.

Output Format:

- Print a single integer, the value of the n^{th} term in the series.
- If n is less than 1, print Invalid.

Constraints:

- $0 \leq n \leq 50$

Example 1

Sample Input:

6

Sample Output:

19

Explanation:

- The first four numbers are 1, 2, 3, 4 .
- 5th term = $1 + 2 + 3 + 4 = 10$
- 6th term = $2 + 3 + 4 + 10 = 19$
- Therefore, the output is 19 .
