Sorting Emergency Alerts

A fire alarm system is issuing emergency alerts, and all the emergency signs are marked with `#` to indicate high priority. Your job is to rearrange the string `s` containing both regular characters and `#` symbols, by moving all the `#` symbols to the front to indicate urgency, while keeping the other characters in their original order. Output the reorganized string.

Input Format:

- A single string `s` containing characters and `#` symbols.

Output Format:

- A string where all the `#` symbols are moved to the front while maintaining the order of the other characters.

Constraints:

- $1 \leq |s| \leq 10^3$
- The string contains only lowercase alphabets, uppercase alphabets, and the `#` symbol.

📄 Description

Submissions

- The string contains only lowercase alphabets, uppercase alphabets, and the # symbol.

Example

Input:

a#b#c#d

Output 1:

###abcd

Explanation:

- In the input string a#b#c#d , we move all # symbols to the front to prioritize the emergency alerts, keeping the other characters in their original order. The result is ###abcd .
