Example 1

Input

17

20

Output

10010 10011

Explanation

The binary numbers from the range 17-20 whose length is greater than or equal to 4 and do not contain three consecutive 0's are:

18 → 10010

19 → 10011

Remove Three Consecutive Zeros with Minimum Length 4

You are given two integers `a` and `b`.

Write a program to generate binary representations for integers within a specified range `a` and `b`, ensuring that each binary number has a length of at least 4 digits and does not contain three consecutive 0's.

The range specified by `a` and `b` is exclusive.

Input Format

- First line contains an integer `a`.
- Second line contains an integer `b`.

Output Format

- The output consists of binary numbers separated by space, which follows the specified conditions.

Constraints

- $1 \leq a < b \leq 1000$
